

adiabatic perturbation theory in pdf

In quantum mechanics, perturbation theory is a set of approximation schemes directly related to mathematical perturbation for describing a complicated quantum system in terms of a simpler one. The idea is to start with a simple system for which a mathematical solution is known, and add an additional "perturbing" Hamiltonian representing a weak disturbance to the system.

In quantum chemistry and molecular physics, the Born-Oppenheimer (BO) approximation is the assumption that the motion of atomic nuclei and electrons in a molecule can be separated. The approach is named after Max Born, and J. Robert Oppenheimer. In mathematical terms, it allows the wavefunction of a molecule to be broken into its electronic and nuclear (vibrational, rotational) components.

La radiazione di fondo venne predetta nel 1948 da George Gamow, Ralph Alpher, e Robert Herman.. Alpher e Herman sono stati in grado di stimare la temperatura della radiazione cosmica di fondo a 5 K, anche se due anni dopo la ricalcolano a 28 K. Anche se ci sono state diverse stime precedenti della temperatura dello spazio, queste soffrivano di due difetti.
