**Attention - Wikipedia**

Attention is a cognitive process of selectively concentrating on one aspect of the environment while ignoring other information. It is the state of being fully conscious and not distracted by anything else. Attention is an essential part of virtually all human behaviour. It is a limited resource, and only a portion of the information available in the environment can be processed at any given time. Attention is a function of the brain, and it is affected by a variety of factors, including fatigue, stress, and alcohol consumption. Attention is a complex process that involves a number of different brain regions, including the prefrontal cortex, the parietal lobe, and the temporal lobe. Attention is a key component of many cognitive functions, including perception, memory, and decision-making. Attention is a limited resource, and it is essential for many aspects of human life, including learning, work, and social interaction.

Evolutionary psychology is a branch of psychology that seeks to explain human behaviour and mental processes in terms of evolutionary principles. It is based on the idea that many of our psychological traits are the result of natural selection. Evolutionary psychologists study how our brains and behaviours have evolved over time to help us survive and reproduce. Evolutionary psychology is a relatively new field, but it has gained a lot of attention in recent years. It has been used to explain a wide range of human behaviours, from mate selection to aggression. Evolutionary psychology is a complex and fascinating field that is still being explored by researchers today.
