2.1. Capacitive tactile sensors. A capacitive sensor consists of two conductive plates with a dielectric material sandwiched between them. For parallel plate capacitors, capacitance can be expressed as,  $C = \frac{A\epsilon_0\epsilon_r}{d}$ . Where C is the capacitance, A is the overlapping area of the two plates,  $\epsilon_0$  is the permittivity of free space,  $\epsilon_r$  is the relative permittivity of the dielectric material ...

## A review of tactile sensing technologies with applications

Electrical and electronic engineers are responsible for the great enabling technologies of our time. They design anything that uses electricity, often working on the cutting edge of technology, using mathematics, science, software, and management skills to solve problems and put the "smarts" into complex systems.
