In particle physics, an elementary particle or fundamental particle is a subatomic particle with no sub structure, thus not composed of other particles. Particles currently thought to be elementary include the fundamental fermions (quarks, leptons, antiquarks, and antileptons), which generally are "matter particles" and "antimatter particles", as well as the fundamental bosons (gauge bosons ...

Comparison with mass. Matter should not be confused with mass, as the two are not the same in modern physics. Matter is a general term describing any 'physical substance'. By contrast, mass is not a substance but rather a quantitative property of matter and other substances or systems; various types of mass are defined within physics – including but not limited to rest mass, inertial mass ...

Models of the Universe are described and classified into three major categories: Historic, Expanding, and Cellular. It is shown that all expanding universe models violate the cosmic edge and containment principle. The multi-millennium conflict between the two major world views --the changing dynamic universe and the unchanging stable universe-- is highlighted.

Abstract. The ancient Chinese concept of health reaches far beyond the mere absence of symptoms to include the presence of a strong vital energy known as qi. A smooth, harmonious, and active flow of qi creates harmony in the body and a balanced state of being in the person. This personal health is further matched by health in nature, defined as regular weather patterns and the absence of disasters.
