Essentials of Digital Signal Processing [B. P. Lathi, Roger A. Green] on Amazon.com. *FREE* shipping on qualifying offers. This textbook offers a fresh approach to digital signal processing (DSP) that combines heuristic reasoning and physical appreciation with sound mathematical methods to illuminate DSP concepts and practices. It uses metaphors

Skin effect is the tendency of an alternating electric current (AC) to become distributed within a conductor such that the current density is largest near the surface of the conductor, and decreases with greater depths in the conductor. The electric current flows mainly at the "skin" of the conductor, between the outer surface and a level called the skin depth.

In physics, the Poynting vector represents the directional energy flux (the energy transfer per unit area per unit time) of an electromagnetic field. The SI unit of the Poynting vector is the watt per square metre (W/m²). It is named after its discoverer John Henry Poynting who first derived it in 1884. 132 Oliver Heaviside also discovered it independently.

Electrical resistance) is the ratio of voltage to current, and is measured in ohms (Ω). The SI unit of electrical resistance is the ohm (Ω), which is defined as the resistance between two terminals of a uniform wire of length 1 m and cross-sectional area 1 m² when a constant current of 1 A produces a constant potential difference of 1 V across the terminals. The ohm is named after the German physicist Georg Simon Ohm.

The Poynting vector is named after John Henry Poynting, who first derived it in 1884. It is named after its discoverer John Henry Poynting who first derived it in 1884. 132 Oliver Heaviside also discovered it independently.

The concept of the electric field was introduced by Michael Faraday. An electric field is created by an

cuerpo cargado en el espacio que lo rodea, y produce una fuerza que ejerce sobre otras cargas ubicadas en el campo.
