3 The survivor function or survivorship function,  $S(t)$ , is the complement to the CDF and is defined as follows:  
( ) 1 ( ) 1 ( ) for continuous time; or ( ) = ( )  $S(t) = P(T > t) = 1 - F(t)$  The value of the survivor function for an individual is the probability that the event has not yet occurred at time  $t$  (continuous) or prior to the close of observation period  $m$  (discrete time).

Welcome! Random is a website devoted to probability, mathematical statistics, and stochastic processes, and is intended for teachers and students of these subjects. The site consists of an integrated set of components that includes expository text, interactive web apps, data sets, biographical sketches, and an object library.

Probability is the branch of mathematics that studies the possible outcomes of given events together with the outcomes' relative likelihoods and distributions. In common usage, the word "probability" is used to mean the chance that a particular event (or set of events) will occur expressed on a linear scale from 0 (impossibility) to 1 (certainty), also expressed as a percentage between 0 and 100%.

In probability theory and statistics, a copula is a multivariate probability distribution for which the marginal probability distribution of each variable is uniform. Copulas are used to describe the dependence between random variables. Their name comes from the Latin for "link" or "tie", similar but unrelated to grammatical copulas in linguistics [citation needed].

Introduction. A probability space is a mathematical triplet  $(\Omega, \mathcal{F}, P)$  that presents a model for a particular class of real-world situations. As with other models, its author ultimately defines which elements  $\omega$ ,  $\mathcal{F}$ , and  $P$  will contain.. The sample space is the set of all possible outcomes. An outcome is the result of a single execution of the model. Outcomes may be states of nature, possibilities ...
