Systems Simulation: The Shortest Route to Applications. This site features information about discrete event system modeling and simulation. It includes discussions on descriptive simulation modeling, programming commands, techniques for sensitivity estimation, optimization and goal-seeking by simulation, and what-if analysis.

Marketing mix modeling (MMM) is statistical analysis such as multivariate regressions on sales and marketing time series data to estimate the impact of various marketing tactics (marketing mix) on sales and then forecast the impact of future sets of tactics. It is often used to optimize advertising mix and promotional tactics with respect to sales revenue or profit.

The General Algebraic Modeling System (GAMS) is a high-level modeling system for mathematical optimization. GAMS is designed for modeling and solving linear, nonlinear, and mixed-integer optimization problems. The system is tailored for complex, large-scale modeling applications and allows the user to build large maintainable models that can be adapted to new situations.

1.. Introduction Predictive modeling of species geographic distributions based on the environmental conditions of sites of known occurrence constitutes an important technique in analytical biology, with applications in conservation and reserve planning, ecology, evolution, epidemiology, invasive-species management and other fields Corsi et al., 1999, Peterson and Shaw, 2003, Peterson et al ...

NONLINEAR PROGRAMMING  $\min_{x \in X} f(x)$ , where  $f: \mathbb{R}^n \rightarrow \mathbb{R}$  is a continuous (and usually differentiable) function of  $n$  variables and  $X \subseteq \mathbb{R}^n$  is a subset of  $\mathbb{R}^n$  with a convex character. If  $X = \mathbb{R}^n$ , the problem is called unconstrained. If  $f$  is linear and  $X$  is polyhedral, the problem is a linear programming problem. Otherwise it is a nonlinear programming problem
