A Practical Introduction to Python Programming

â€¢ Binding a variable in Python means setting a name to hold a reference to some object. â€¢ Assignment creates references, not copies â€¢ Names in Python do not have an intrinsic type. Objects have types. â€¢ Python determines the type of the reference automatically based on the data object assigned to it.

Hands-on Python Tutorial - Loyola University Chicago

Python Guide Documentation, Release 0.0.1 PythonNet Python for .NET is a package which provides near seamless integration of a natively installed Python installation with the .NET Common Language Runtime (CLR). This is the inverse approach to that taken by IronPython (see above), to which it is more complementary than competing with.
