SDN-based solutions for Moving Target Defense network

OpenFlow-based SDN is currently being rolled out in a variety of networking devices and software, delivering substantial benefits to both ... Software Defined Networking (SDN) is an emerging network architecture where network control is decoupled from forwarding and is directly programmable. This migration of control, formerly tightly bound in ...

Software-Defined Networking: The New Norm for Networks

In this centralized approach to network management, the underlying network infrastructure is abstracted from applications. SDN provides choice in automation and programmability across data centers, campuses, and wide-area networks. Use Cisco software-defined solutions to build intent-based networks.
