A spherical cow is a humorous metaphor for highly simplified scientific models of complex real life phenomena. The implication is that theoretical physicists will often reduce a problem to the simplest form they can imagine in order to make calculations more feasible, even though such simplification may hinder the model's application to reality.. The phrase comes from a joke that spoofs the ...

Chiral Solitons: A New Approach to Solitons Over Minkowski Space. Authors: Paul Werbos Comments: 4 Pages. This letter proposes a new approach to the unmet challenge of plausibly modeling the electron and other elementary particles as "solitons," as stable vortices of force fields.

The incremental learning derives its name from the incremental nature of the learning process. In incremental learning, all facets of knowledge receive a regular treatment, and there is a regular inflow of new knowledge that builds upon the past knowledge.

Hi there. I am trying to derive the lift equation for aircrafts through Bernoulli's law. I am having some trouble though, since I wind up with the differences between the force that acts on the top of the wing and the force that acts under the wing instead of the net force, so to speak.

A classic, extensively studied nonlinear problem is the dynamics of a pendulum under the influence of gravity. Using Lagrangian mechanics, it may be shown that the motion of a pendulum can be described by the dimensionless nonlinear equation $\ddot{\theta} + \sin \theta = 0$ where gravity points "downwards" and θ is the angle the pendulum forms with its rest position, as shown in the figure at right.

The velocity on the X-axis depends on the width and depth of the hole in the boxcar. For a hole infinitely narrow (a perfect point) with a finite thickness (i.e. the hull of the box car has thickness) the water would leave the boxcar with perfect downward motion.

Nuclear fusion is the only process reasonably capable of powering the sun, and one product of this fusion is invisible particles called 'neutrinos'. But why don't we observe as many solar neutrinos as theory would predict?
