Mass spectrometry (MS) is an analytical technique that ionizes chemical species and sorts the ions based on their mass-to-charge ratio. In simpler terms, a mass spectrum measures the masses within a sample. Mass spectrometry is used in many different fields and is applied to pure samples as well as complex mixtures.

Mass spectrometry - Wikipedia

Since the stress stability studies can provide valuable insight in interpreting the degradation pathways and degradation products of the active pharmaceutical ingredients (APIs) and formulations [17,18], and the LC-QTOF-MS technique has been the state-of-the-art technique for the identification of unknown compounds for in vivo metabolism, potential biomarkers and related substances researches.
