The Art of Memory - AlzhUp

Memory management is a form of resource management applied to computer memory. The essential requirement of memory management is to provide ways to dynamically allocate portions of memory to programs at their request, and free it for reuse when no longer needed.

A memory management unit (MMU), sometimes called paged memory management unit (PMMU), is a computer hardware unit having all memory references passed through itself, primarily performing the translation of virtual memory addresses to physical addresses. It is usually implemented as part of the central processing unit (CPU), but it also can be in the form of a separate integrated circuit.

Chapter 1: Decision Trees – What Are They? 3 Figure 1.1: Illustration of the Decision Tree Each rule assigns a record or observation from the data set to a node in a branch or segment based on the value of one of the fields or columns in the data set. 1 Fields or columns that are used to create the rule are called inputs. Splitting rules are applied one
