

water supply and sanitary pdf

Access to water supply and sanitation in Ethiopia is amongst the lowest in Sub-Saharan Africa and the entire world. While access has increased substantially with funding from foreign aid, much still remains to be done to achieve the Millennium Development Goal of halving the share of people without access to water and sanitation by 2015, to improve sustainability and to improve service quality.

Water supply and sanitation in Ethiopia - Wikipedia

A water supply system or water supply network is a system of engineered hydrologic and hydraulic components which provide water supply. A water supply system typically includes: A drainage basin (see water purification - sources of drinking water).; A raw water collection point (above or below ground) where the water accumulates, such as a lake, a river, or groundwater from an underground aquifer.

Water supply network - Wikipedia

The Board of Water Supply owns and maintains approximately 105 miles of mains and 1,140 fire hydrants. Its primary responsibility is to provide an adequate supply of safe, potable water for domestic, industrial and fire-fighting purposes.

Most buildings will use mains water supply. However, rainwater is an option to partly or fully replace mains water. Mains systems offer reliable supply that meets required standards for potable drinkable water. More information can be found here on Code requirements, Ministry of Health recommendations, Designing a rainwater system

Mains water supply and using rain water in a building - Level

As an independent global health and safety organization, NSF International tests and certifies products and writes standards for the food, water and consumer goods industries.
